WEATHER OF CONCERN

Weather of Concern

- A Pacific frontal system is forecast to move into Northern California Thursday night. Light higher elevation snow Thursday night will be followed by heavier snowfall on Friday as the front moves across the state.
- A cold storm system will approach the Southern California coast Thursday night into Friday, bringing rain and mountain snow to Southwest California late Friday and Saturday.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

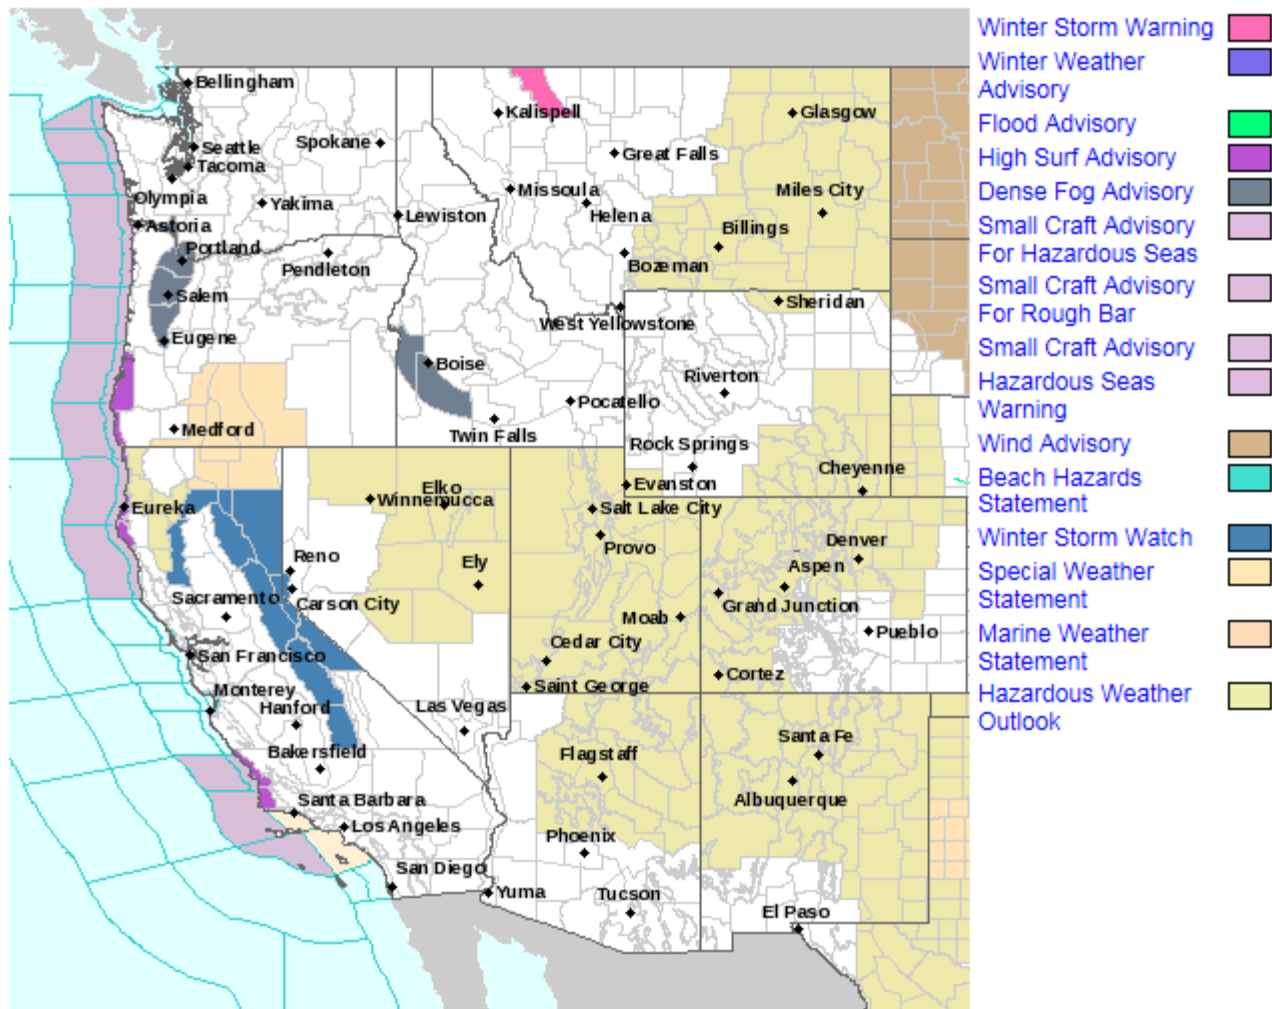

NORTHERN CALIFORNIA

Winter solstice occurred overnight at 0244 this morning. Some areas of gusty north to northeast winds will last into early Wednesday. There will be a break between systems today into tomorrow as higher pressure moves over Northern California. Thursday night and Friday, a major weather system will move into the region with rain and snow, locally heavy at times. There will also be some gusty southerly winds develop with that system, so uprooting of trees will again be possible. Local water courses will run a little high again as well. Snow levels will stay above most pass levels at first, but lower Friday night to around 1200 feet in the far northwest to around 4500 feet in the southern areas. Holiday mountain travel is likely to become somewhat difficult Friday into Saturday morning. Christmas Eve and Day look to be mostly dry and milder under a passing high pressure ridge. What weather is in store for early next week is quite uncertain at this time, but there is some chance that another (less) cold, wet system will move through the region Monday with lingering showers Tuesday.

SOUTHERN CALIFORNIA

Winds will become light across the entire region and stay light through Friday morning. A ridge of high pressure aloft will cause temperatures to warm to between 5 and 10 degrees above normal today, with 50s to mid 60s across the mountains and valleys of Central California and upper 60s and 70s in the valleys of Southern California. An area of low pressure approaching from the southwest will bring scattered showers to Southern California into Friday morning. Most locations across Southern California will receive less than a half inch of rainfall with this low pressure area. No rainfall is expected across Central California with this low. Temperatures will cool a little across Southern California today and tomorrow as skies become cloudy, but little change in temperature is anticipated across Central California. Minimum humidity will remain in the single digits and teens across Central California away from the San Joaquin Valley today and then increase tomorrow. A Pacific trough from the Gulf of Alaska will bring a period of rain to Central California starting Friday afternoon and then move south into Southern California Friday night. Showers will continue across the region through Saturday night. Most locations with this trough will receive between 1 and 2 inches of rainfall. However, some foothill and mountain locations will receive between 2 and 4 inches of rainfall. The snow level will be between 4,000 and 5,000 feet. Strong south to west winds will surface across the mountains and deserts Friday afternoon through Saturday evening. Temperatures will cool significantly Friday and Saturday, with well below normal temperatures Saturday. A weak ridge of high pressure will bring a little warming and drying to the area Sunday and Monday.
